Square body demonstrates powerful downsizing capacity.

JIG CYLINDERS C SERIES

Richly abundant series of 9 different types and 69 models

A rich series configuration spanning from φ6 [0.236in.] to φ100 [3.940in.] responds to diverse needs far better than previous thin type cylinders.
Moreover, Non-ion specification is also available as standard.
(Excludes φ6 [0.236in.], φ8 [0.315in.], and φ10 [0.394in.])

Provides powerful back-up for device miniaturization

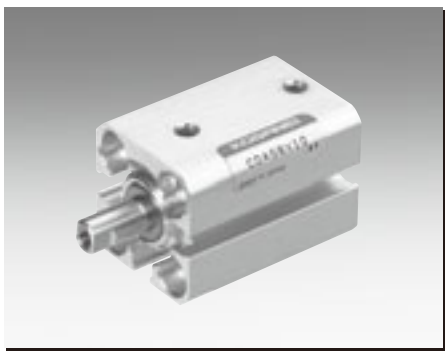
Exhibits no protrusions in its external shape even after a sensor switch has been mounted, for easy mounting in tight spaces.
This cylinder is one step up on cylinders of the same class in terms of size, mass, and performance.

φ 6 [0.236in.]

φ 100 [3.940in.]

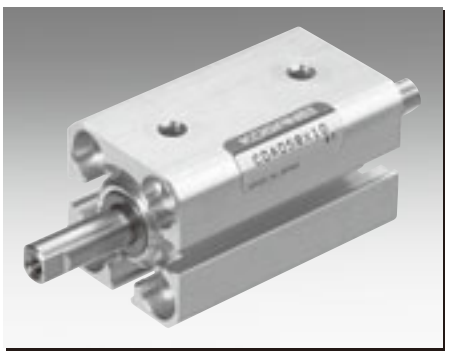
New Line-Up Includes φ 6 [0.236in.], φ 8 [0.315in.], and φ 10 [0.394in.]

For a greater selection in response to needs for miniaturization, 3 new bore sizes at φ 6, φ 8, and φ 10 have been added, increasing the range of sizes to choose from.



Standard Cylinders
φ6 [0.236in.]～φ100 [3.940in.]

Non-rotating Cylinders
φ6 [0.236in.]～φ10 [0.394in.]



Double Rod Cylinders
φ6 [0.236in.]～φ100 [3.940in.]

The Jig Cylinders C Series Includes the 9 Types Shown Below.

■Standard Cylinders p.137

■Non-rotating Cylinders p.145

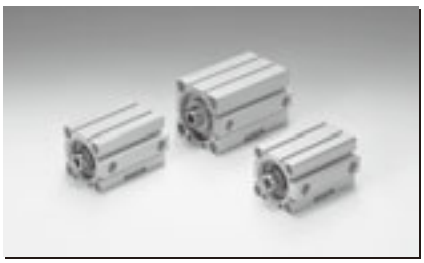
■Square Rod Cylinders p.149

■Double Rod Cylinders p.154

■Tandem Cylinders p.161

■Dual Stroke Cylinders p.170

■Lateral Load Resistant Cylinders p.180



■Long Stroke Cylinders p.185

■End Keep Cylinders p.190

■Mounting Brackets p.197

■Sensor Switches p.199

■ The colored areas include bore sizes of ϕ6, ϕ8, and ϕ10.
Note: Non-rotating cylinders are set at bore sizes ϕ6, ϕ8, and ϕ10 only.

Cylinder Thrust

Select a suitable bore size considering the load and air pressure to obtain the required thrust.
Since the figures in the table are calculated values, select a bore size that results in a load ratio (load ratio = $\frac{\text{Load}}{\text{Calculated value}}$) of 70% or less (50% or less for high speed).

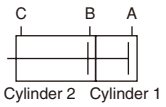
●How to read the thrust table

1. For the thrust of the double rod cylinder double acting type, see the pull side of the double acting type thrust table. For the thrust of the single acting type, see the single acting pull type thrust table.
2. The thrust of the tandem cylinder is double that of the standard type when air is supplied simultaneously to Port A and Port B, for any operation type before the stroke in Cylinder 1 is complete. When air is supplied to any of Ports A, B, or C alone, then the thrust is the same as for the standard type.



3. The thrust for dual stroke cylinders is the same as for the standard type, for any operation type.
4. When directly carrying a load, care must be exercised of a lateral load.
   For details, see p.206 “Lateral Load.”

●Square rod cylinders

	80		
	100		
Single acting type	**12**	5, 10, 15, 20, 25, 30	5, 10, 15, 20, 25, 30
	16		
	20		
	25		
	32		
	40		
	50	10, 15, 20, 25, 30, 35, 40	10, 15, 20, 25, 30, 35, 40

Remarks: 1. Stroke tolerance $^{+1}_{0}$ [$^{+0.039in.}_{0}$]
2. In most cases, body cutting is used for the non-standard strokes.
However, body cutting is not used for strokes of less than 5mm for ϕ12～ϕ40, and strokes of less than 10mm for ϕ50～ϕ100. The collar packed is used for these cases.
Bore sizes ϕ6 to ϕ10 are collar packed only.

Order Codes for Double Rod Cylinders

Operation type

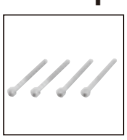
- See table for bore size and stroke.
- Mounting brackets are included at shipping.
- For the order codes of sensor switches only, see p.199.
- For heat resistant specification, sensor switch is not available.
- In sizes ϕ12 and ϕ16 with foot mounting brackets and strokes of less than 10mm, the foot mounting bracket and sensor switch may interfere with each other, which could prevent 2 sensor switches from being mounted. For details, consult us.

Notes: 1. Used for both single acting push type and single acting pull type. Not available for bore sizes ϕ6, ϕ8, and ϕ10.
2. In the standard cylinders, a magnet for the sensor switch is not built-in.
3. Not available for the cylinder with magnet or the cylinder with bumper.
4. Specifications are the same for both sides.
5. For the double acting type only. Not available in heat resistant specification, however. Not available for bore sizes ϕ6, ϕ8, and ϕ10.
6. For details of sensor switches, see p.1544.
7. Not available for bore sizes ϕ6, ϕ8, ϕ10 and ϕ12.
8. Cannot be mounted on bore size ϕ40 with centering location (**-G**). Not available for bore sizes ϕ6, ϕ8, and ϕ10.
9. Bore sizes ϕ6, ϕ8, ϕ10, and ϕ12 are not non-ion specification.
10. For information regarding the cylinder joint and cylinder rod end for male thread, see p.1568.

Additional Parts (To be ordered separately)

Foot mounting bracket (p.197)

Flange mounting bracket (p.198)

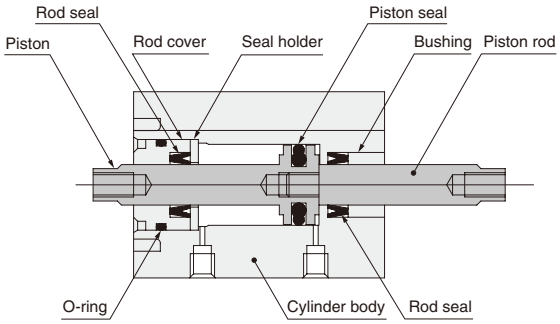


Mounting screws (p.209)

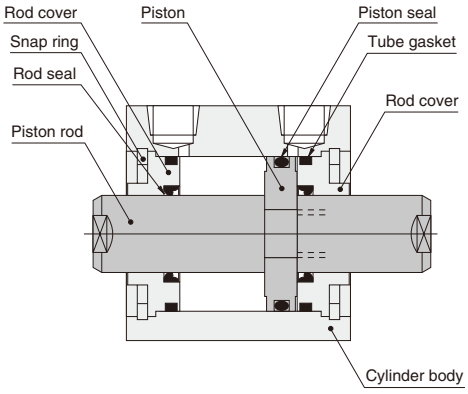
Inner Construction and Major Parts

●Double acting type (CDAD)

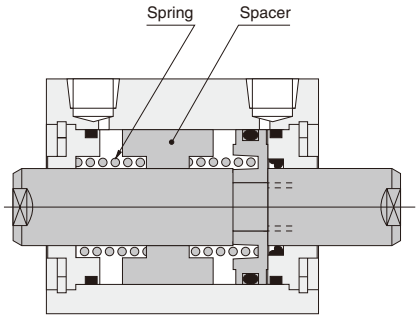
● ϕ6～ϕ10



● ϕ12～ϕ100

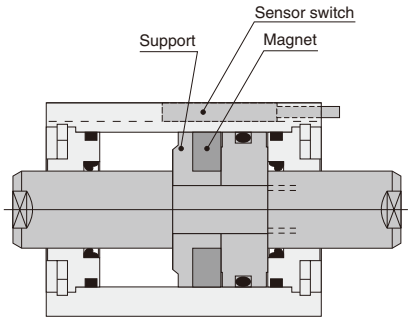


●Single acting type (CSAD)

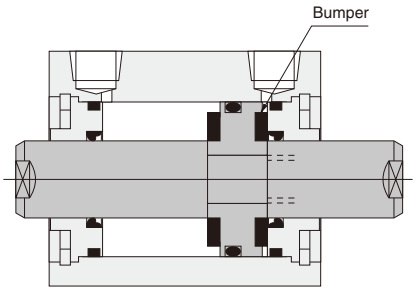


Note: Bore sizes ϕ6 to ϕ10 are not available as single acting cylinders.

●Cylinder with magnet



●With bumper



Note: Bore sizes ϕ6 to ϕ10 are not available with bumpers.

Major Parts and Materials

Parts \ Bore mm	ϕ6	ϕ8	ϕ10	ϕ12	ϕ16	ϕ20	ϕ25	ϕ32	ϕ40	ϕ50	ϕ63	ϕ80	ϕ100
Cylinder body	Aluminum alloy (anodized)												
Piston	Stainless steel			Aluminum alloy (special rust prevention treatment)									
Piston rod	Stainless steel			Stainless steel (chrome plated)			Steel (chrome plated)						
Seal	Synthetic rubber (NBR)												
Rod cover	Aluminum alloy (special wear-resistant treatment)												
Snap ring	—			Steel (phosphate coating)									
Spring	—			Piano wire							—		
Spacer	—			Aluminum alloy (special rust prevention treatment)							—		
Bumper	—			Synthetic rubber (NBR; urethane for ϕ12 only)									
Magnet	Neodymium magnet			Plastic magnet									
Support	—			Aluminum alloy (special rust prevention treatment)									
Bushing	Copper alloy			—

Notes: 1. The above table is for the standard strokes.
2. Sensor switch codes A and B show the lead wire lengths.
A: 1000mm [39in.] B: 3000mm [118in.]

Calculation example: For the mass of a double acting type cylinder with magnet, bore size of 25mm, stroke of 30mm, and with 2 sensor switches (**ZE135A**)
104.2＋(3.99×30)＋37.47＋(15×2)＝291.37g [10.278oz.]

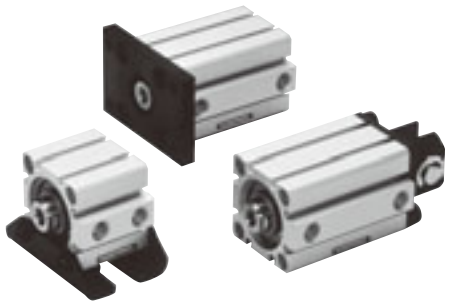
JIG CYLINDERS C SERIES MOUNTING BRACKETS

Foot Mounting Bracket, Flange Mounting Bracket, Clevis Mounting Bracket



Order Codes of Mounting Bracket Only

□ – **CDA** □

Bore size ϕ **12**～ϕ **100** Note5

Cylinder type
CDA —— For standard, double rod end, tandem, dual stroke, long stroke, lateral load resistant, and end keep cylinder
CDAL —— For square rod cylinder Note4

Mounting bracket
1 —— Foot bracket Note1
● One set consists of 2 brackets.
3 —— Flange bracket Note2
7 —— Clevis bracket Note3

Notes: 1. Cannot be mounted on tandem or dual stroke cylinders.
And cannot be mounted on the 5mm strokes of ϕ 16 and ϕ 25, and 10mm strokes of ϕ 50, ϕ 63, and ϕ 80 of the standard cylinders.
2. Cannot be mounted on the head side of the tandem cylinder, cylinder 1 side of the dual stroke cylinder, the rod side of the square rod cylinder with centering location, or the bore size ϕ 40 with centering location (**-G**).
3. Cannot be used with anything other than the long stroke cylinder, the lateral load resistant cylinder, or the end keep cylinder.
4. Applicable to the foot mounting bracket only.
5. Not available for ϕ 6 [0.236in.], ϕ 8 [0.315in.], and ϕ 10 [0.394in.].

Dimensions of Foot Mounting Bracket (mm)

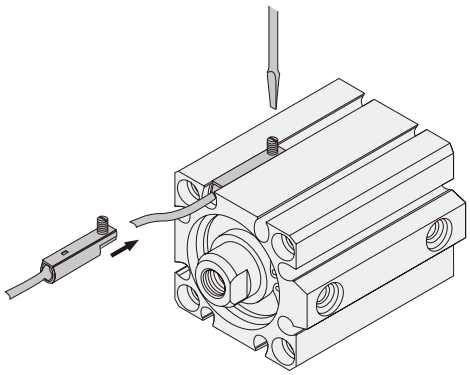
ZE201	Reed switch type	without indicator lamp	DC5V～28V AC85～115V	Vertical lead wire
ZE155	Solid state type	with indicator lamp	DC4.5V～28V	Horizontal lead wire
ZE255	Solid state type	with indicator lamp	DC4.5V～28V	Vertical lead wire
ZE102	Reed switch type	with indicator lamp	DC10V～28V AC85～115V	Horizontal lead wire
ZE202	Reed switch type	with indicator lamp	DC10V～28V AC85～115V	Vertical lead wire

●For details of sensor switches, see p.1544.

Moving Sensor Switch

- Loosening mounting screw allows the sensor switch to be moved along the switch mounting groove on the cylinder body.
- Tighten the mounting screw with a tightening torque of 0.1～0.2N·m [0.9～1.8in·lbf].



Minimum Cylinder Strokes When Using Sensor Switches

●Solid state type

mm

Bore size	2 pcs. mounting Note		1 pc. mounting
	1-surface mounting	2-surface mounting	
6～12 [0.236～0.472in.]	30	10	5
16～100 [0.630～3.940in.]	10		

Note: Two pieces can be mounted with 5mm stroke.
Take note that overlapping may occur, however.

16～100 [0.630～3.940in.]	10		

Sensor Switch Operating Range, Response Differential, and Maximum Sensing Location

● Operating range : ℓ
The distance the piston travels in one direction, while the switch is in the ON position.

●Response differential : C
The distance between the point where the piston turns the switch ON and the point where the switch is turned OFF as the piston travels in the opposite direction.

●Solid state type

mm [in.]

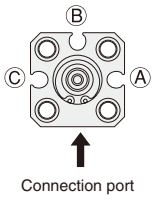
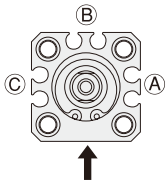
Mounting Sensor Switch

● ϕ6〜ϕ12



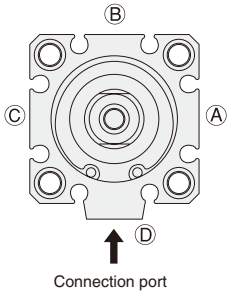
The standard mounting positions at shipping for the end of stroke detection on the rod side is either surface Ⓐ or surface Ⓒ, while the end of stroke detection on the head side is surface Ⓑ.
If mounting sensor switches on the same surface for detection of both ends is required, consult us.
(The sensor switch may sometimes protrude from the cylinder body.)

● ϕ16



Mounting on any of surfaces Ⓐ, Ⓑ, or Ⓒ allows detection of the end of stroke on the rod side and head side.
(The sensor switch may sometimes protrude from the cylinder body.)

● ϕ20〜ϕ100



● The drawing is for ϕ 32.

Mounting on any of surfaces Ⓐ, Ⓑ, Ⓒ, or Ⓓ allows detection of the end of stroke on the rod side and head side.
(The sensor switch may sometimes protrude from the cylinder body.)
However, the **ZE2**□□ sensor switches cannot be mounted on the Ⓓ position in ϕ 32, ϕ 40, and ϕ 50.

Mounting Location of End of Stroke Detection Sensor Switch

When the sensor switch is mounted in the position shown in the diagram below (figures in the tables are reference values), the magnet reaches the sensor switch's maximum sensing location at the end of the stroke.

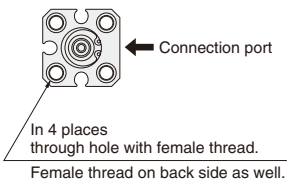
Body mounting

Jig cylinder mounting holes include both through holes with female mounting thread, and dedicated female mounting threads, for a variety of mountings. For details, see the diagrams below.

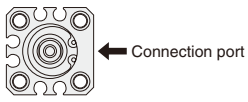
■Standard cylinders, Double rod cylinders

●Standard cylinders ●Double rod cylinders ●Lateral load resistant cylinders
●Long stroke cylinders ●End keep cylinders

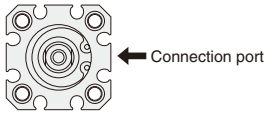
● ϕ 6～ ϕ 12



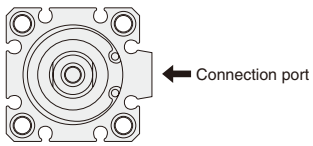
● ϕ 16



● ϕ 20, ϕ 25



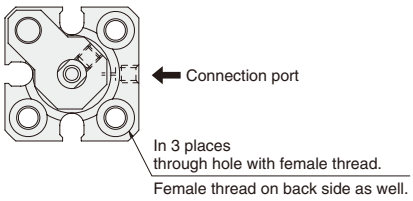
● ϕ 32～ ϕ 100



Remark: Mounting methods are the same regardless of bore sizes.

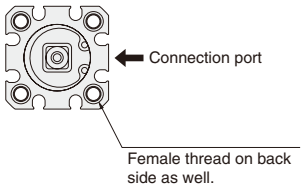
■Non-rotating cylinders

● ϕ 6, ϕ 8, ϕ 10

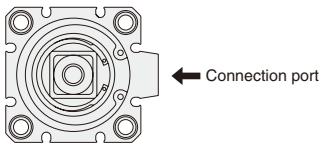


■Square rod cylinders

● ϕ 20, ϕ 25



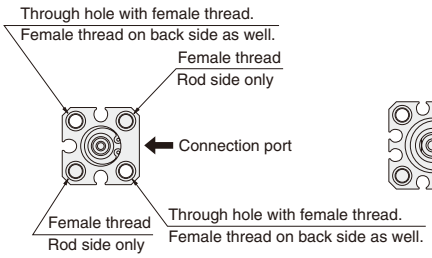
● ϕ 32～ ϕ 63



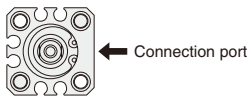
Remark: Mounting methods are the same regardless of bore sizes.
However, the mounting method for “with centering location” differs from the figure above. See p.153.

■Tandem cylinders

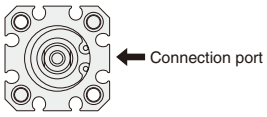
● ϕ 12



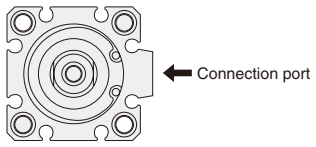
● ϕ 16



● ϕ 20, ϕ 25



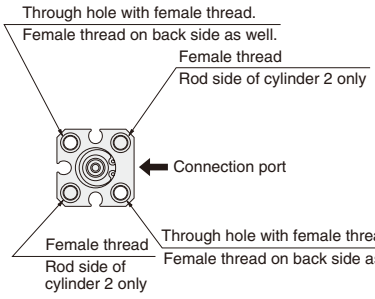
● ϕ 32～ ϕ 100



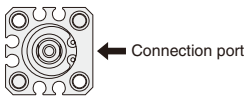
Remark: Mounting methods are the same regardless of bore sizes.

■Dual stroke cylinders

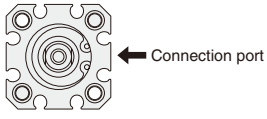
● ϕ 12



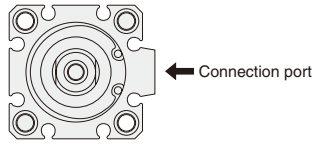
● ϕ 16



● ϕ 20, ϕ 25



● ϕ 32～ ϕ 100



Remark: Mounting methods are the same regardless of bore sizes.

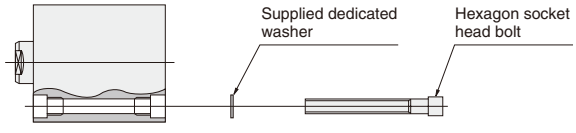
Notes: 1. Avoid applying lateral loads on the piston rod, with the exception of Lateral load resistant cylinders, Long stroke cylinders, and End keep cylinders.
2. When using through holes for mounting, always use the supplied dedicated washers. (except ϕ6, ϕ8, and ϕ10)
3. Mount an external stopper, etc., to prevent the cylinder from being subjected to direct shocks during operation.

●Tightening thread of the end of piston rod

Since a tool (thin wrench) has been prepared for holding the piston rod when tightening the rod end thread, consult us.

Order code: L115069

● Always use the supplied dedicated washer whenever using a through bolt to directly mount the cylinder body in place.※ Use the bolts shown in the table below to mount in place.
And for bolts used for direct mounting, see p.209.



※Washer not available for bore sizes ϕ6, ϕ8, and ϕ10.

Bore size mm [in.]	6 [0.236]	8 [0.315]	10 [0.394]	12 [0.472]	16 [0.630]	20 [0.787]	25 [0.984]	32 [1.260]	40 [1.575]	50 [1.969]	63 [2.480]	80 [3.150]	100 [3.940]
Hexagon socket head bolt nominal size	M3	M3	M3	M3	M3	M3	M4	M4	M5	M6	M6	M8	M10

Bracket mounting

- Foot mounting brackets cannot be installed on tandem cylinders and dual stroke cylinders.
- Flange mounting brackets cannot be installed on the head side of tandem cylinders and the stroke 1 side of dual stroke cylinders.
- Clevis mounting brackets cannot be installed on anything except for lateral load resistant cylinders, long stroke cylinders, and end keep cylinders.

Non-standard stroke

- In most cases, body cutting is used for the manufacturing for non-standard strokes.
  However, body cutting is not used for strokes of less than 5mm for ϕ 12 [0.472in.]$\sim\phi$40 [1.575in.], and strokes of less than 10mm for ϕ50 [1.969in.]$\sim\phi$100 [3.940in.]. The collar packed is used for these cases. Moreover, sizes ϕ6 [0.236in.] $\sim\phi$10 [0.394in.] are collar packed only. For delivery, consult us.
  Rod side end keep cylinders cannot be collar packed.
- Dimensions

1. Additional strokes obtained by body cutting remain classed as non-standard strokes.
2. Additional strokes obtained by collar packed are classed as standard strokes in the longer one.

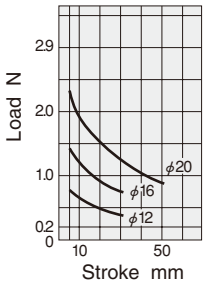
Lateral Load

- Keep the lateral load on the rod end of the lateral load resistant cylinder, long stroke cylinder, and end keep cylinder, at or below the values shown in the graphs below.
  Note: Avoid applying lateral load on any cylinder types other than the lateral load resistant cylinder, long stroke cylinder, and end keep cylinder.

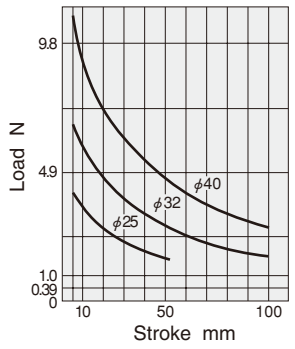
●Lateral load resistant cylinders

● Standard type (CBDA)

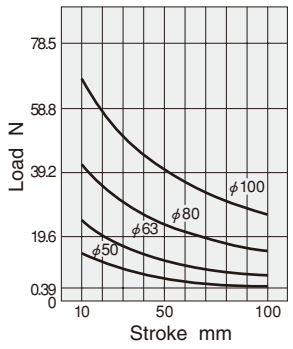
● ϕ 12 [0.472in.]$\sim$ ϕ 20 [0.787in.]



● ϕ 25 [0.984in.]$\sim$ ϕ 40 [1.575in.]



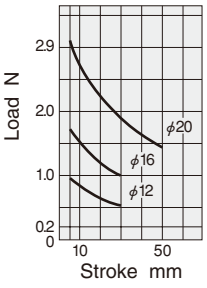
● ϕ 50 [1.969in.]$\sim$ ϕ 100 [3.940in.]



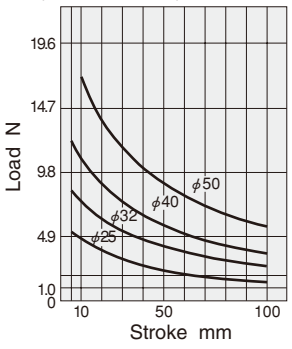
1N = 0.2248lbf.
1mm = 0.0394in.

● Cylinder with magnet (CBDAS)

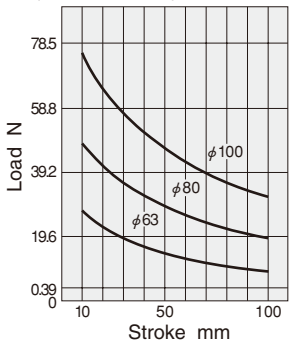
● ϕ 12 [0.472in.]$\sim$ ϕ 20 [0.787in.]



● ϕ 25 [0.984in.]$\sim$ ϕ 50 [1.969in.]



● ϕ 63 [2.480in.]$\sim$ ϕ 100 [3.940in.]

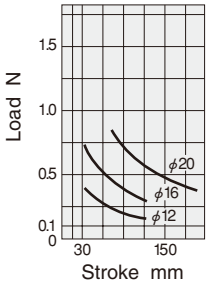


1N = 0.2248lbf.
1mm = 0.0394in.

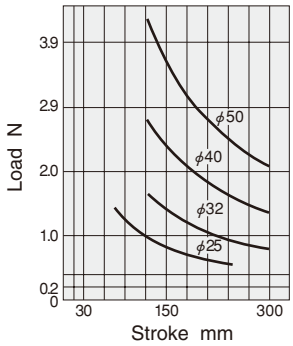
●Long stroke cylinders, End keep cylinders

●Standard type (CCDA,CCDAK)

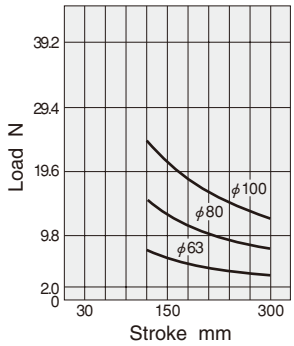
● ϕ 12 [0.472in.]$\sim$ ϕ 20 [0.787in.]



● ϕ 25 [0.984in.]$\sim$ ϕ 50 [1.969in.]



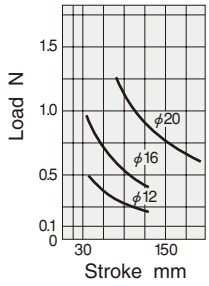
● ϕ 63 [2.480in.]$\sim$ ϕ 100 [3.940in.]



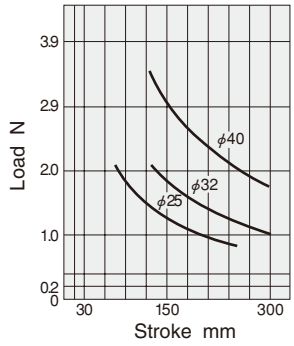
1N = 0.2248lbf.
1mm = 0.0394in.

●Cylinder with magnet (CCDAS, CCDAKS)

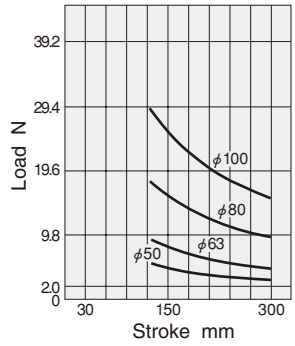
● ϕ 12 [0.472in.]$\sim$ ϕ 20 [0.787in.]



● ϕ 25 [0.984in.]$\sim$ ϕ 40 [1.575in.]



● ϕ 50 [1.969in.]$\sim$ ϕ 100 [3.940in.]



1N = 0.2248lbf.
1mm = 0.0394in.

Single acting cylinders

Standard cylinders single acting push type
Standard cylinders single acting pull type
Double rod cylinders single acting type
Tandem cylinders single acting push type
Dual stroke cylinders single acting push type
Dual stroke cylinders single acting pull type

If in the above types' application, air is being continuously applied from a connection port, and the spring remains in a compressed state for long periods of time, the piston may sometimes fail to return to its original position even after the air is exhausted. If equipment is to be used in this way over long periods of time, consult us.

End keep cylinder

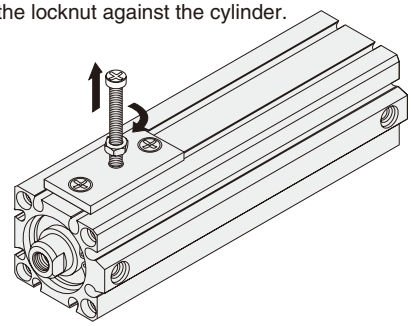
● Control circuit

1. For control of Jig end keep cylinders, we recommend the use of 2-position, 4-, 5-port valves. Avoid the use of a control circuit of ABR connections (exhaust centers) with 3-position valves that exhaust air from 2 ports.
2. Always use meter-out control for speed control. Meter-in control may result in failure of the locking mechanism to release.

Notes: 1. It is dangerous to supply air to a connection port on a side with a locking mechanism while already exhausted, because the piston rod could suddenly extend (retract). In addition, it could also cause galling of the lock piston and piston rod, resulting in defective operation. Always supply air to the connection port on the opposite side to ensure back pressure is applied.
2. When restarting operations after air has been exhausted from the cylinder due to completion of operations or to an emergency stop, always start by supplying air to the connection port on the opposite side of the locking mechanism.
3. Connect the valve port A (NC) to the connection port on the side with the locking mechanism.

● Manual operation of the locking mechanism

While the locking mechanism is normally released automatically through cylinder operations, it can also be released manually. For manual release, insert an M3 × 0.5 screw that has 30mm [1.18in.] below head length into the manual override opening, thread it in about 3 turns into the internal lock piston, and then pull up the screw. To maintain the manual override for adjustment, etc., thread the locknut onto the screw and, with the locking mechanism in a released state, tighten the locknut against the cylinder.



Notes: 1. It is dangerous to release the lock when a load (weight) is present on the piston rod, because it may cause a sudden fall or cause the unintended piston rod's extension (retraction). In this case, always supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.
2. If the locking mechanism cannot easily be released even with manual override, it could be the result of galling of the lock piston and piston rod. In this case, supply air to the connection port opposite the one adjacent to the locking mechanism before releasing the locking mechanism.
3. Because water, oil, dust, etc., entering via the manual override opening could be a cause of defective locking or other erratic operation, use a cover, etc., for protection when using in locations subject to dripping water, dripping oil, or to large amounts of dust, etc.

Sensor switch

In the standard cylinder, a magnet for the sensor switch is not built-in.
To install a sensor switch, a cylinder with a built-in magnet for the sensor switch is required.

Notes: 1. For the sensor switch mounting location and moving ranges, see p.199.
2. Contact protection measures are required for connecting inductive loads to reed sensor switches or for when capacitive surges are generated. For contact protection measures, see p.1566.

Piping

Always thoroughly blow off (use compressed air) the tubing before connecting it to the cylinder. Entering chips, sealing tape, rust, etc., generated during piping work could result in air leaks or other defective operation.

Atmosphere

1. If using in locations subject to dripping water, dripping oil, etc., or to large amounts of dust, use a cover to protect the unit.
2. The product cannot be used when the media or ambient atmosphere contains any of the substances listed below.
   Organic solvents, phosphate ester type hydraulic oil, sulphur dioxide, chlorine gas, or acids, etc.

Lubrication

The product can be used without lubrication, if lubrication is required, use Turbine Oil Class 1 (**ISO VG32**) or equivalent.
Avoid using spindle oil or machine oil.

OPTIONAL ROD END SHAPE PATTERNS

Use an order form of rod end pattern and fill the items on the selected one from among 22 types of optional patterned shapes to obtain made-to-order cylinders of non-standard rod end shapes. The optional rod end shapes can be applied to the entire Jig Cylinders C Series. For the order form containing the optional patterned shapes, contact us.
(Except ϕ6, ϕ8, ϕ10)

Order Codes
